

 **comfort click** We make buildings smart

What is an efficient smart home?

1. Based on standard hardware equipment (e.g. KNX, Z-Wave)
2. Doesn't make you dependable on manufacturer/installer
3. Enables advanced, customizable automation (what happens when certain parameters are met e.g. turn lighting and cooling off when your home is empty)
4. Upgradable

What is KNX?

- KNX is a **worldwide standard** for home automation. It exists since 1999 and was developed to allow products from various manufacturers to work seamlessly together.
- Globally there are more than:

500
KNX MANUFACTURERS

116.000
CERTIFIED KNX INSTALLERS

8.000
CERTIFIED KNX PRODUCTS

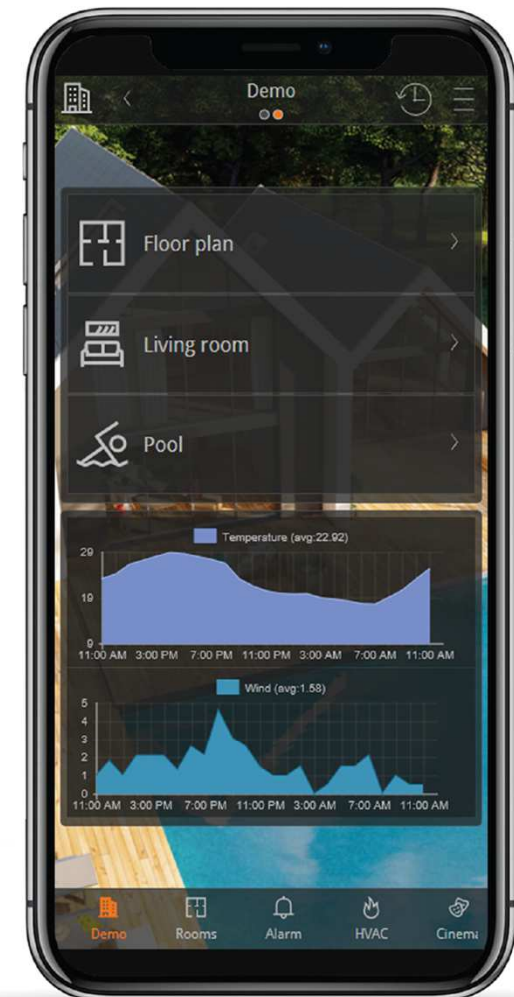

What is ComfortClick system?

1. ComfortClick enables you to **control all smart home devices** from a **single app** or **with your voice**.
2. It offers **limitless possibilities** **regarding automation** of your home.
3. Enables you to **fully customize your app** for smart home control.
(use actual photos / layout of your home)

ComfortClick brings energy efficiency, comfort and safety to your smart home.

What is possible?

- ComfortClick can help you reduce your energy consumption costs by more than 10%.
- Heating & cooling are automatically regulated according to the current indoor and outdoor temperature and occupancy of the building.

What is possible?

- No more irritating lowering of each shade individually during the evening and raising them in the morning. ComfortClick will do it according to sunrise and sunset and data from outdoor illumination sensors.
- When the alarm is armed ComfortClick will automatically turn off the lights, electrical sockets and reduce heating or air-conditioning.
- While you're away ComfortClick will randomly switch different lights on and off, thus creating an illusion someone is at home even when the house is empty.
- ...and many more options.

Facts and Stats about ComfortClick

ComfortClick products are controlling **more than 30.000 buildings** all over the globe - both commercial & residential.
